## 45 and Up Study: Second follow-up data dictionary (Wave 3)

This data dictionary provides analysts with information on the structure and coding of the variables that make up the second follow-up questionnaire dataset. Different from the first follow-up is that the raw variables that were used to construct the derived variables are now also included so that it is possible for calculation of alternative derived variables based on analysts' own assumptions.

## Notes

- For character variables, blank = unanswered
- For numeric variables, missing (.) = unanswered

## Acknowledgements

This research was completed using data collected through the 45 and Up Study. The 45 and Up Study is managed by the Sax Institute in collaboration with major partner Cancer Council NSW; and partners: the National Heart Foundation of Australia (NSW Division); NSW Government; and the
Australian Red Cross Lifeblood.
We thank the many thousands of people participating in the 45 and Up Study.
