# Introduction

---

The 45 and Up Study has recruited 267,153 participants who completed a baseline questionnaire between 2006 and 2009. Of these, 142,548 participants completed a questionnaire at the first round of follow-up (Wave 2; 2012-2015).

This Data Book provides the prevalence of all variables in the Wave 2 surveys and information on response rates and mode of questionnaire delivery. Many of the items from the baseline questionnaire were repeated. New items relating to blood donation and vaccinations among others were added. Derived variables are included, such as BMI and total time spent doing activities. The original variables used to derive these additional variables are available to researchers but not shown in this data book. Cell frequencies less than 5 have been combined to create broader categories, and invalid responses or missing values have been grouped into a 'Missing/Invalid' category. Some cleaning of the responses using the correct skip pattern logic has been undertaken.

## Acknowledgements

This research was completed using data collected through the 45 and Up Study. The 45 and Up Study is managed by the [Sax Institute](#) and supported by strong partnerships with Cancer Council NSW; the Heart Foundation; NSW Ministry of Health; Department of Communities and Justice; and the Australian Red Cross Lifeblood.

We thank the many thousands of people participating in the 45 and Up Study. The 45 & Up Study which began in 2006, is a world class longitudinal research resource with more than a quarter million participants over the age of 45. The data is available to researchers to investigate health and ageing.

The Sax Institute is a national leader in promoting the use of research evidence to improve health and wellbeing by driving the use of research in health policies, programs and services to benefit all Australians. For more information on the 45 & Up Study or the Sax Institute please visit [www.saxinstitute.org.au](http://www.saxinstitute.org.au).
